Grappa Riserva

Puedi feshes

Grappa is a distilled alcoholic drink made from marc that remains after the fermentation process of new wine.

The operation, which was a light-hearted moment after the tiring work of grape harvesting and fermentation, was carried out inside the wine cellars using copper machinery that worked slowly to provide harmony, aromas and a velvety taste. The time spent waiting was passed by eating and, even more so... drinking! This is why distillation was often carried out at night.

We are speaking in the past as today distillation is protected by the State Monopolies Department and therefore cellars send fresh marc to the "distiller" who then returns the packaged grappa.

The romantic atmosphere has been lost, but at least the artisan distillery where Sequerciani takes its own marc (Distilleria Nannoni) maintains the care, method and attention provided during those... Grappa nights!

Grappa Riserva

Category: Biological aged Grappa Riserva, distilled in Italy at Nannoni Grappe Srl Paganico (GR), Via del Quadrone 135.

Proof: Alc. 42% Vol.

Raw material: Fresh marc, still dripping with all types of wine from the farm's grapes.

Distillation: Artisan, with vapour boilers and low-degree discontinuous columns; the head and tail are cut manually by the Master Distiller after each boil.

Ageing: For 18 months in French durmast barriques used only once to refine wine. Ageing takes place inside the warehouse sealed by the Customs and Monopolies Agency, which guarantees and certifies duration and method.

Visual inspection: A good, lively golden colour.

Olfactory inspection: A fruity fragrance of fresh marc, with an immediate reminder of the aroma of the Maremma grape harvest. The aromas from refinement in wood, vanilla, almond and honey notes combine delicately.

Flavour inspection: In the mouth it is balanced, enveloping and soft.

Tasting advice: 18° C in a Cognac glass.

Pairing: Excellent after a meal. Especially suited to handmade chocolate and dry baked products.
